

Absolutely — and this is the **perfect moment** to do this.

What you're doing now is exactly what real engineers do before shipping: **feature audit + polish**.

Below is your **complete feature checklist** for the **User Authentication & Management module** of your LMS.

Use this to review your project and make sure nothing important is missing.

User Authentication & Management — Feature Checklist

Authentication Features

Registration

- Register with **email + password**
 - Choose **role** (Student / Instructor)
 - Password stored using **secure hashing**
 - Duplicate email prevented
 - Cannot register as admin
 - Input validation (email, password strength, required fields)
-

Login

- Login with email + password
 - Invalid credentials handled gracefully
 - Inactive users blocked
 - Session created securely
 - Role-based redirect after login:
 - Student → Student Dashboard
 - Instructor → Instructor Dashboard
 - Admin → Django Admin
-

Logout

- Logout clears session
 - Cannot access protected pages after logout
-

User Management

Profile & Identity

- Custom User model
 - Role stored and immutable after creation
 - Email is unique identifier
 - Admin override using `is_superuser`
-

Role-Based Access Control

- Students cannot access instructor pages
 - Instructors cannot access student pages
 - Unauthenticated users redirected to login
 - Admin bypasses business rules
-

Password Management

- Password hashing enforced
 - Change password
 - Password validation rules
-

UX & Flow

- Friendly error messages on auth failure
 - Redirect back to intended page after login
 - No infinite redirect loops
 - Proper 403 / 404 handling
-

Admin Integration

- Admin can manage users in Django Admin
 - Admin can deactivate users
 - Admin can reset passwords
 - Admin can promote to staff/superuser
-

Security Safeguards

- CSRF protection enabled
 - Session protection enforced
 - Cannot escalate role via request tampering
 - Sensitive pages protected with login & role checks
 - Direct URL access to dashboards blocked properly
-

Interview-Ready Summary

“The authentication system supports secure registration, role-based access control, proper session management, admin overrides, and strict validation to prevent unauthorized actions.”

Final Mental Model

Auth is not a feature — it's the foundation.

If you'd like, next I can:

- Do the same feature audit for **Course & Enrollment**
- Or help you prepare a **final README architecture section**
